Thirty-nine young engineering teachers have been appointed Ford Foundation Postdoctoral Fellows for the year 1963-64 by Dean Gordon S. Brown of the School of Engineering at the Massachusetts Institute of Technology.

These fellows receive support under a program established by the Ford Foundation as a means for encouraging promising young men to embark on careers in engineering education. All of the recipients have expressed a keen desire to teach, Dean Brown said, and all will hold part-time academic appointments in addition to the Ford Foundation Postdoctoral Fellowships. This joint appointment provides an opportunity for promising young men to gain experience in both teaching and research in preparation for careers as engineering faculty members.
